

PRESS RELEASE

Northwest Hospital & Medical Center Selects dbMotion for Interoperable Patient Record

*Advanced interoperability solution empowers care providers to span acute and
community care environments*

Pittsburgh, Pa., February 26, 2010 — dbMotion, a provider of health interoperability solutions, has been chosen by [Northwest Hospital & Medical Center](#) in Seattle, Washington to create a single interoperable electronic patient record across numerous information technology environments for both in-hospital and ambulatory care providers.

Northwest Hospital & Medical Center is a full-service, non-profit hospital with a history of clinical excellence and innovative approaches to patient care. In recent years, Northwest Hospital has been a regional leader in implementing technologies to improve patient safety, including inpatient and ambulatory electronic health records, automated medication reconciliation and bedside computer charting, among others.

“Above all else, Northwest Hospital is committed to providing safe, quality patient care,” said Bill Schneider, president and CEO of Northwest Hospital. “dbMotion’s solution will be a key element in helping us connect everyone on a patient’s care team, no matter where they are, and giving them access to the critical information they need to provide comprehensive, coordinated treatment. In the end, that means better outcomes and a more satisfying experience for our patients.”

dbMotion, in partnership with Allscripts, will create a complete solution spanning Northwest Hospital’s inpatient, acute care environment and outpatient providers in its network, providing physicians and clinicians across the continuum of care with a single electronic patient record. The solution will connect many systems, including Northwest Hospital’s ambulatory electronic health record, Siemens, PICIS ED and GE Radiology, among others.

dbMotion fulfills the vision of connected healthcare. dbMotion’s health interoperability solution enables healthcare organizations and health information exchanges (HIEs) to meaningfully integrate and leverage their information assets by placing an integrated patient record within clinicians’ workflows. dbMotion closes information gaps between caregivers, enhances decision making and drives improvements in the quality and efficiency of patient care.

“We see health information exchange between acute and ambulatory environments as the key to better and more effective healthcare,” said Peter McClennen, dbMotion’s president for North America. “We are excited to partner with Northwest Hospital in providing integrated and actionable health information that improves the patient experience and enhances physician workflows.”

About dbMotion

dbMotion is an innovative provider of health interoperability solutions for connected healthcare. It develops and markets the dbMotion™ Solution, a proven SOA-based platform that enables healthcare organizations and exchanges to meaningfully integrate and leverage their information assets, driving improvements in the quality, safety and efficiency of patient care. dbMotion transforms care through the creation of a virtual patient record that logically connects patient information in existing systems without requiring their replacement. By providing access to integrated patient information the solution connects care settings, bridging gaps that often exist between inpatient/acute care and community care, and demonstrates a compelling return on investment (ROI). For more information about dbMotion visit www.dbmotion.com or write to info@dbmotion.com.
